

## REVIEW OF THE LEAF-BEETLES SUBFAMILY CRYPTOCEPHALINAE GYLLENHAL, 1813 (COLEOPTERA: CHRYSOMELIDAE) OF THE FAUNA OF LATVIA

**Andris Bukejs, Arvīds Barševskis, Uldis Valainis**

Bukejs A., Barševskis A., Valainis U. 2007. Review of the leaf-beetles subfamily Cryptocephalinae Gyllenhal, 1813 (Coleoptera: Chrysomelidae) of the fauna of Latvia. *Cross - Border Cooperation in Researches of Biological Diversity* (Barševskis A. & Šaulienė I. ed.), *Acta Biol. Univ. Daugavp.*, Suppl. 1: 81 - 106.

The information about leaf-beetles Cryptocephalinae Gyllenhal, 1813 (Coleoptera: Chrysomelidae) subfamily of Latvian fauna is presented. The list of Latvian species of Cryptocephalinae is given, in which 36 species have been divided. Faunistic data about 27 leaf beetles, which are stored in the collection of Daugavpils Universitate Institute of Systematic Biology (DUBC), have been published. In total 663 specimens were reviewed in the investigation.

Key words: Coleoptera, Chrysomelidae, Cryptocephalinae, Latvia, fauna.

*Andris Bukejs, Arvīds Barševskis, Uldis Valainis. Institute of Systematic Biology, Daugavpils University, Vienības Str. 13, Daugavpils, LV-5401, Latvia; andris.bukejs@biology.lv; arvids.barsevskis@biology.lv; uldis.valainis@biology.lv*

### INTRODUCTION

Cryptocephalinae Gyllenhal, 1813 is one of largest, widespread subfamily of the leaf-beetles (Chrysomelidae). 5 tribus, about 40 genera are known. In Latvia 2 genera and 36 species are known (Telnov 2004; Silfverberg 2004). In adjacent territories the number of the registered species from this subfamily differs a little: Belarus - 40 species (Lopatin, Nesterova 2005), Lithuania - 35 species, Estonia - 29 species (Silfverberg 2004), St. Petersburg and Leningrad province - 31 species (Romantsov 2007).

Four species, which occur in Latvia, in Northern Europe are known only from Latvia – *C. (C.) signatifrons* Suffrian, 1847, *C. (Burlinius) chrysopus* (Gmelin, 1788), *C. (Burlinius) elegantulus* Gravenhorst, 1807 and *C. (Burlinius) pygmaeus* Fabricius, 1792 (Silfverberg 2004).

Imago of Cryptocephalinae occur mostly on herbs and deciduous trees, often on flowers, rarely on coniferous trees. Larvae live within larval case, inhabit ground-litter, sometimes occur on plants, feed on leaf-litter or fresh leaves (especially in young instars), pupate

in the soil or on stems of herbs (Bieńkowski 2003).

The first data about the leaf-beetles' species of *Cryptocephalinae* Gyllenhal, 1813 subfamily in Latvian fauna appeared in following works (Fischer 1784, 1791; Kawall 1866; Seidlitz 1887-1891; and others).

Latvian fauna of leaf-beetles of this subfamily has been investigated irregularly till now. In M. Stiprais' (1977) publication one can find faunistic data on 19 species of *Cryptocephalus* Müller, 1764 and one species of *Pachybrachis* Chevrolat, 1837. In 1993 A. Barševskis' monograph „The beetles of Eastern Latvia” was issued, data about 27 species of *Cryptocephalinae* subfamily can be found there. In recent years only separate data about occurrence of some rare species have been published (Barševskis et al. 2004; Telnov 2001; Telnov, Kalnījs 2003; Telnov et al. 2005; Telnov et al. 2006), as well as list of species of leaf-beetles of *Cryptocephalinae* subfamily can be found in the published list of Latvian beetles (Telnov et al. 1997; Telnov 2004).

The aim of this work is to summarize information on *Cryptocephalinae* subfamily from the collection of Daugavpils University Institute of Systematic Biology (DUBC). In the article also the list of Latvian species of *Cryptocephalinae* has been published. 36 species have been defined for Latvian fauna.

## MATERIAL AND METHODS

The material has been collected in the time period from 1986 till 2007. In total 663 specimens of *Cryptocephalinae* subfamily have been defined. The material is stored in Daugavpils University Institute of Systematic Biology (DUBC).

In this article the systematics of leaf-beetles conforms with H. Silfverberg (2004) and A. Warchałowski (2003) works. Scientific works of the following authors (Bieńkowski 2004; Lopatin, Nesterova 2005; Gurjeva, Kryzhanovskij 1965; Mohr 1966; Warchałowski 2003) were used for determination of the species.

The information about the species, which can be found in Latvia was based on Latvian (Telnov 2004) and North European (Silfverberg 2004) catalogues of beetles, and work “The genus *Cryptocephalus* (Chrysomelidae) of Palearctic region” (Lopatin, Dovgailo 2002).

The publication is supplemented with the cartographic material with the findings of the enlisted species, it has been produced in ArcGis 9.1. The pictures are made by stereomicroscope Zeiss SteREO Lumar V12 and Axiocam digital camera.

## RESULTS AND DISCUSSION

During the research 27 species and 2 genera of *Cryptocephalinae* subfamily were recorded. Overall, the species list of the Latvian fauna of this subfamily includes 36 species. Species marked with (-) are considered by the authors as possibly to be found in Latvia in the future, but they were presented in old data (Seidlitz 1887-1891; Rathlef 1905) or in adjacent countries.

## LIST OF LATVIAN CRYPTOCEPHALINAE

(Burlinius) populi</i> Suffrian, 1848</p> <p>35. <i>C. (Burlinius) pusillus</i> Fabricius, 1777</p> <p>36. <i>C. (Burlinius) rufipes</i> (Goeze, 1777)</p> <p>Recently described <i>C. solivagus</i> Leonardi &amp; Sassi, 2001 is very similar with <i>C. hypochoeridis</i> (L.). The authentic determination is possible at analysis of aedeagus and spermathecae. In our research we did</p> |
|---|--|

not ascertain *C.solivagus* Leonardi & Sassi, 2001. It is possible to predict a finding of this species in Latvia, as western border of its habitat is not specified yet. We give pictures of aedeagus of *C. hypochoeridis* (L.) (Fig. 1, 2, 3 ), *C.aureolus* Sffr. (Fig. 4, 5) and *C.sericeus* (L.) (Fig. 6. 7).

The status of *C.frenatus* Laich. is not clear. Some authors (Schöller 2002; and others) consider it as a colour variation and synonym of *C.decemmaculatus* (L.) (Fig. 8).

Occurrence of two species of the genus *Cryptocephalus* Geoffr. is unclear in Latvia. In 19th century *C. anticus* Sffr. and *C. quadripustulatus* Gyll. were recorded for „Livland” (or Livonia) with no precise locality. The southern part of the former Livland now belongs to Latvia, but the northern one is part of Estonia (Telnov 2004). In later years no data about the occurrence of this species in Latvia can be found, therefore it is unlikely that these species can be traced in Latvia.

## FAUNISTIC DATA

In the list after the species name the place where it was found and the collecting date are indicated, in the brackets are indicated the number of collected specimens, information about habitat and collector's name.

### *Pachybrachis hieroglyphicus hieroglyphicus* (Laicharting, 1781)

Examined material: 33 exs. - Localities (fig. 9): Daugavpils, 26.VI.1992. (1, valley of river Daugava; xeric meadow, leg. A.Barševskis); Daugavpils, Mežciems, Jaunciema Str. 2, 19.VII.2007. (2, leg. K.Aksjuta, M.Murd); Daugavpils d., Slutiški, 01.VII.1995. (9, valley of river Daugava, leg. A.Barševskis), 07.VII.1995. (5, old valley or river Daugava, leg. A.Barševskis); Daugavpils d., Elerne, 26.VI.2005. (1, leg. A.Barševskis & K.Barševska); Krāslava d., Krāslava, 05.VI.1989. (1, leg. A.Barševskis); Krāslava d., Piedruja, 23.V.1989. (4, leg. A.Barševskis).

***Cryptocephalus (Burlinius) pusillus* Fabricius, 1777**

Examined material: 34 exs. - Localities (fig. 35): Daugavpils d., Silene Naure Park, Ilgas, 02.VI.1993. (1, leg. A.Barševskis), 05.VII.1993. (1, leg. A.Barševskis), 09.VII.1993. (1, leg. A.Barševskis), 02.IX.1993. (1, leg. A.Barševskis), 18.VI.1995. (1, leg. A.Barševskis), 03.VII.1995. (1, leg. A.Barševskis), 05.VII.1995. (1, leg. A.Barševskis), 11.IX.1997. (2, leg. A.Barševskis); Daugavpils d., Vabole, 04.VII.1999. (7, leg.

R.Cibuļskis), 10.VII.1999. (1, leg. R.Cibuļskis); Krāslava d., Peipiņi, 21.VIII.1989. (1, leg. A.Barševskis); Krāslava d., Škeltova, 02.VII.1987. (1, leg. A.Barševskis); Preiļi d., Pelēči, 18.VIII.1997. (1, leg. I.Jurkjāne), 24.VIII.1997. (1, leg. I.Jurkjāne); Jēkabpils d., Dunava, 25.VII.1993. (1, leg. A.Barševskis), 16.VIII.1997. (1, leg. A.Barševskis); Jēkabpils d., Rubene rural municipality, Rubeņi, 01.VI.1997. (1, leg. I.Leiskina); Kuldīga d., Augšdaugavas Nat. Prot. Area, Alsunga, 28.VIII.2005. (1, leg. A.Barševskis, A.Bukejs, U. Valainis); Talsi d., Stende, 57°07'19"N 022°32'26"E, 19.VII.2007. (3, cutting area in pine forest, leg. A.Barševskis, U.Valainis, A.Pankjāns, A.Soldāns); Valmiera d., Briede, 57°39'85"N 25°13'54"E, 21.VIII.2006. (1, leg. A.Pankjāns); Ventspils d., Moricsala Nature Reserve, Moricsala Isl., VII.2003. (1, leg. U.Valainis), VIII.2003. (1, leg. U.Valainis), IX.2003. (1, leg. U.Valainis), 03.IX.2004. (1, leg. A.Barševskis), 14.IX.2005. (1, leg. A.Barševskis).

## CONCLUSION

The following species can be mentioned as the most frequent: *C. (C.) octopunctatus* (Scopoli, 1763) (52 specimens), *C. (C.) aureolus* Suffrian, 1847 (66 specimens), *C. (C.) sericeus* (Linnaeus, 1758) (65 specimens), *C. (C.) moraei* (Linnaeus, 1758) (36 specimens), *C. (Burlinius) ocellatus* Drapiez, 1819 (41 specimens) and *C. (Burlinius) fulvus* Goeze, 1777 (122 specimens).

*C. (C.) cordiger* (Linnaeus, 1758) (1 specimen), *C. (C.) sexpunctatus* (Linnaeus, 1758) (6 specimens), *C. (C.) distinguendus* Schneider, 1792 (3 specimens), *C. (C.) bipunctatus* (Linnaeus, 1758) (1 specimen),

*C. (C.) nitidulus* Fabricius, 1787 (1 specimen), *C. (C.) flavipes* Fabricius, 1781 (8 specimens), *C. (Disopus) pini* (Linnaeus, 1758) (2 specimens), *C. (Burlinius) punctiger* Paykull, 1799 (1 specimen), *C. (Burlinius) pallifrons* Gyllenhal, 1813 (4 specimens) and *C. (Burlinius) frontalis* Marsham, 1802 (1 specimen) could be indicated as rarer species.

Nine species were not registered in our research: *C. (C.) parvulus* Müller, 1776, *C. (C.) signatifrons* Suffrian, 1847, *C. (C.) vittatus* Fabricius, 1775, *C. (Burlinius) elegantulus* Gravenhorst, 1807, *C. (Burlinius) chrysopus* (Gmelin, 1788), *C. (Burlinius) pygmaeus* Fabricius, 1792, *C. (Burlinius) querceti* Suffrian, 1848, *C. (Burlinius) populi* Suffrian, 1848 and *C. (Burlinius) rufipes* (Goeze, 1777).

## ACKNOWLEDGMENTS

We are grateful to our colleagues for cooperation in the collecting of a material.

Part of research has been done in Silene Nature Park within the framework of activities of INTERREG IIIA project "Cross-border Cooperation of Universities of Latvia-Lithuania-Belarus in Environmental Protection / CBC ECO-HOUSE".

The study has been supported by VPD1/ESS/PIAA/04/NP/3.2.3.1/0003/0065 project.
