

# Biology and Control of Emerald Ash Borer

Edited by Roy G. Van Driesche and Richard C. Reardon

The Forest Health Technology Enterprise Team (FHTET) was created in 1995 by the Deputy Chief for State and Private Forestry, USDA Forest Service, to develop and deliver technologies to protect and improve the health of American forests. This book was published by FHTET as part of the technology transfer series.

On the cover: Cover design by Sheryl Romero and Denise Binion, Forest Health Technology Enterprise Team. Background image: Understory green ash seedlings (*Fraxinus pennsylvanica*, Oleaceae) released after large ash trees were killed by emerald ash borer in Okemos, Michigan in 2014, photo by Leah S. Bauer; (bottom row, left to right) Fully mature *Tetrastrichus planipennis* larvae break free of emerald ash borer larval skin and pupate in the larval gallery under the tree bark. We thank the authors of the individual chapters for their expertise in reviewing and summarizing the literature and providing current information on the biology and control of emerald ash borer. Thanks to Denise Binion for layout and design of this publication. We would also like to thank the U. S. Department of Agriculture, Forest Service, Agricultural Research Service and Animal and Plant Health Inspection Service for technical and financial support and Forest Health Technology Enterprise Team for providing funding for the preparation and printing of this publication.
