Key words: Coleoptera, Cerambycidae, faunistics, new records, Dhofar, Sultanate of Oman, Palaearctic region.

Abstract: Totally 16 Cerambycidae species are reported for Dhofar in Sultanate of Oman. Ten species are reported for the first time for Oman: *Lygrus longicornis* (Pic, 1895); *Kabatekiella dalihodi* Holzschuh, 2008; *Yementallyrama nasheri* Adlbauer, 2007; *Idactus coquereli* (Fairmaire, 1890); *Apomecyna lameerei* (Pic, 1895); *Enareta caudata* Fähræus, 1873; *Eunidia breuningae* Villiers, 1951; *Eunidia kristensenii* Aurivillius, 1911; *Eunidia nebulosa nebulosa* Erichson, 1843 and *Coptops aedificator* Fabricius, 1792. The genus *Jordanoleiopus* Lepesme & Breuning, 1955 is new recorder for the fauna of Palaearctic Region.

INTRODUCTION

The cerambycid fauna of Sultanate Oman is very little known, since most of the species hitherto recorded from the Arabian Peninsula, have been collected in Saudi Arabia and Yemen.

The paper presents results of the Czech entomological expedition to Sultanate of Oman in September/October 2011. During this expedition were visited, with a special attention to interesting biotopes in Dhofar region, especially Jabal Samhan and Jabal al Qamar. The expedition included four Czech entomologists, Richard Ambrus, Walter Grosser, Pavel Kučera and Jiří Voříšek.

The beetles were collected individually using generally known methods such as beating, sweeping, individual collecting on wood, flower and leaves. The most effective method for collecting longhorn beetles were used UV light.

The total number of longhorn beetles recorded by Czech expedition from Sultanate of Oman is 16 species, but this is probably only a small number of species actually occurring there.

Richard Ambrus, Walter Grosser

All the species of longhorn beetles were determined by Dr. Karl Adlbauer (Graz, Austria), Petr Kabátek (Prague, Czech Republic) and Pierpaolo Rapuzzi (Prepotto, Italy).
