

Chetogena filipalpis Rondani from the vicinity of the Karadag Nature Reserve, Crimea (Diptera: Tachinidae)

V.A. Richter

Richter, V.A. 1998. *Chetogena filipalpis* Rondani from the vicinity of the Karadag Nature Reserve, Crimea (Diptera: Tachinidae). *Zoosystematica Rossica*, 7(1): 152.

Chetogena filipalpis Rondani is found in vicinity of the Karadag Nature Reserve in Crimea, with a record of a new host, *Psychidea alba* Solanikov (Lepidoptera, Psychidae).

V.A. Richter, Zoological Institute, Russian Academy of Sciences, Universitetskaya nab. 1, St.Petersburg 199034, Russia.

Chetogena filipalpis Rondani is distributed from Middle and Southern Europe to the Transcaucasus and Middle Asia. Until present it was known in Crimea only from one locality, Konek on northern slopes of Crimea Mountains, Crimea Nature Reserve, where it was collected from a clearing in mountain forest (Bukovsky, 1940).

A female of *Ch. filipalpis* was reared by E.V. Rutyán from a larva of *Psychidea alba* Solanikov (Lepidoptera, Psychidae) collected on the mountains Echkidag, 500 m, near Tshebetovka (Eastern Crimea). The fly emerged on 11.VI.1997. The discovery of *Ch. filipalpis* in close vicinity of the Karadag Nature Reserve allows us to regard this species as an addition to the list of tachinids of this reserve (Richter, 1996). *Ch. filipalpis* Rd. is known to parasitize different Psychidae (Tschorsnig & Herting, 1994). *Psychidea alba* Solanikov is for the first time recorded as a host of this oligophagous tachinid species.

Acknowledgements

The author is sincerely grateful to E.V. Rutyán (Institute of Zoology, National Academy of Sciences of Ukraine, Kiev) for the material. The work was supported by Russian Basic Research Foundation grants No. 96-04-48804 and No. 95-15-97910; the scientific collections of the Zoological Institute, Russian Academy of Sciences, which obtain support from the Science and Technology Ministry of the Russian Federation (Reg. No. 98-03-16) were used.
