

Replacement name for *Reuterella* Timoshkin, 2004 (Plathelminthes: Neorhabdocoela)

O.A. Timoshkin & M.J. Grygier

Timoshkin, O.A. & Grygier, M.J. 2005. Replacement name for *Reuterella* Timoshkin, 2004 (Plathelminthes: Neorhabdocoela). *Zoosystematica Rossica*, **13**(2), 2004: 241.

Mariareuterella **nom. n.** is proposed as a replacement name for the turbellarian genus *Reuterella* Timoshkin, 2004, a junior primary homonym of the psocopteran insect genus *Reuterella* Enderlein, 1903.

In a monographic treatment of the new turbellarian family Rhynchokarlingiidae from Lake Baikal (Timoshkin, 2004), a number of new genera were proposed, one of which has proven to be a primary junior homonym of an existing genus, and thus unavailable. *Reuterella* Timoshkin, 2004 (type species by original designation *Diplosiphon baekmanae* Timoshkin, 1986), has been proposed for 13 species (12 of them new) of turbellarians and is an endemic genus in Lake Baikal. Its senior homonym, *Reuterella* Enderlein, 1903 (type species by monotypy *Leptella helvimaacula* Enderlein, 1901) was proposed for a currently still monotypic genus of Psocoptera (bark lice) in the family Elopsocidae (see Enderlein, 1903).

In accordance with the International Code of Zoological Nomenclature, Article 60.3, we hereby propose the new name *Mariareuterella* nom. n. to serve as the replacement name for *Reuterella* Timoshkin, 2004, with the same type species. As was true of the old name, the new one honours Finnish neurobiologist Dr. Maria Reuter.
