Stekolshchikov & Khruleva (2015) described the species *Macrosiphoniella (Asterobium) jaroslavi* from Chukotka Autonomous Territory of Russia. A colony of this species, consisting of an old fundatrix, apterous and alate viviparous females, males, oviparous females, and apterous and alate nymphs was found 6 August 2012 on apices of shoots between flowers of *Artemisia arctica* Less. and *Artemisia tilesii* Ledeb. nearby Beringovskiy village (Anadyrskiy District). The species was named in honor of Jaroslav Holman, a great Czech aphidologist. Unfortunately, this specific name is a junior primary homonym of the name *Macrosiphoniella (Macrosiphoniella) jaroslavi* Szelegiewicz, 1980.

To avoid homonymy, we are providing here the new replacement name *Macrosiphoniella (Asterobium) jaroslaviholmani* nom. nov.
