# NOVAE STOMINORUM<sup>1)</sup> FORMAE E AMERICA MERIDIONALI.

V. Lutshnik.

## **Tichonia peruana** sp. n.

Piceo-nigra, parum nitida, elytris indistincte violaceo micantibus, ore cum antennis pedibusque nigris, palpis rufescentibus. Capite lato, laevi, impressionibus frontalibus profundis. Oculis magnis, convexis. Prothorace transverso, latitudine ad angulos basalis 1,2 brevior, capite cum oculis multo latiore, basi parum emarginato, antice fere recto, lateribus antice rotundato, latitudinem maximam in medio attingente, basin sensim angustato, ante angulos basales distincte sed leviter sinuato, his subacutis, angulis anticis rotundatis, haud prominulis; disco medio convexo, linea media profunda utrinque abbreviata, striga basali interna lata, externa oblitterata. Elytris sat — latis, ellipticis, ad humeros thoracis basi haud latioribus, latitudine 1,43 longioribus, lateribus multo rotundatis, ante apicem sinuatis, apice acutis, profunde striatis, interstitiis convexis. Sterno et abdomine laevibus. Prosterni processu intercoxali apice rotundato, haud marginato, segmento ultimo in ♀ utrinque foveolis setigeris 2 instructo.

Long. 17 mm.

Peru: *Chanchamyo*. 1 ♀ in coll. m. Statura latiore, thorace lateribus postice angustatis ante angulos basales sinuatis ab speciebus hujus generis facile distinguenda.

**Platysma** (*Parhypates*) **irrequietum** sp. n. Majus, haud convexum, piceo-nigrum, parum nitidum, antennis, palpis pedibusque rufo-piceis. Capite lato, laeve, impressionibus frontalibus sat profundis, setis ocularibus utrinque 2. Prothorace transverso, capite cum oculis latiore, cordato, anterius rotundato, latitudinem maximam ante medium attingente, basin versus angustato, ante angulos posticos rectos sinuato, apice emarginato, angulis anticis subprominulis, rotundatis, basi haud punctato, striga basali haud profunda, linea media tenuiter impressa utrinque abbreviata, setis lateralibus utrinque 3. Elytris latiusculis, lateribus rotundatis, ad humeros thoracis basi distincte latioribus, ante apicem sinuatis, dorso subplanatis, tenuiter striatis, striis subtilissime punctatis, interstitiis planis, tertio ad striam tertiam punctis 3 instructo. Subtus corpore laevi, prosterni processu intercoxali apice immarginato.

Long 15 mm.

Chili. 1 specimen in coll. m. *Pl. gayi* Chaud. et *chalybicolor* Chaud. affine, sed corpore haud metallico, lato, minus convexo praesertim distinguendum.

**Pl.** (*Parhypates*) **profundestriatum** Motsch. ab. **expletum** ab. n. Formae typicae simile, sed elytrorum interstitio tertio punctis tribus distinctissimis notato.

Long. 12,5 mm.

Chili. 1 ♀ in coll. m.

<sup>1)</sup> Stomina = Pterostichina (cf. Lutshnik, Acta Societ. Entomol. Stauróp., III., 1927, 51).
