

## To the knowledge of leaf beetles (Coleoptera: Chrysomelidae) from Turkey

### К познанию листоедов (Coleoptera: Chrysomelidae) Турции

Институт проблем экологии и эволюции им. А.Н. Северцова РАН, Ленинский пр., 33, Москва 119071 Россия

**Key words:** Coleoptera, Chrysomelidae, Turkey, taxonomy, new subspecies, synonymy.

**Ключевые слова:** Coleoptera, Chrysomelidae, Турция, таксономия, новый подвид, синонимия.

**Abstract.** A list of 42 species is given, 3 species are firstly recorded for Turkey. A new subspecies *Cryptocephalus rugicollis ottomana* subsp. n. is described, and a new synonymy is established: *Orsodacne humeralis* Latreille, 1804 = *Orsodacne variabilis* Baly, 1877, syn. n. = *Orsodacne humeralis ruficollis* Pic, 1895, syn. n.

**Резюме.** Приведен список из 42 видов листоедов, из которых 3 вида указаны для Турции впервые. Описан новый подвид *Cryptocephalus rugicollis ottomana* subsp. n., установлена новая синонимия: *Orsodacne humeralis* Latreille, 1804 = *Orsodacne variabilis* Baly, 1877, syn. n. = *Orsodacne humeralis ruficollis* Pic, 1895, syn. n.

Thanks to amiability of Dr. Maxim Nabozhenko (Institute of Arid Zones SSC RAS, Rostov-on-Don, Russia) I have an opportunity to study interesting material of Chrysomelidae collected in Turkey in 2009–2014. It includes 42 species, among them 3 species are firstly found in this country, and one new subspecies is described. Besides, a population of *Gonioctena linnaeana* (Schrank, 1781) very possibly belongs to a new subspecies. Investigation of one species from the genus *Derocrepis* Weise, 1883 allows me to discuss taxonomic problems connected with this genus.

All data about distributions of a few species cited below are based on Catalogue of Palaearctic Coleoptera [2010].

The studied material including types of the new subspecies is deposited in the author's collection.

#### A taxonomical list of species

##### *Orsodacne humeralis* Latreille, 1804

**Material.** Tokat, Devici Dağ, 8 km E Kızılınlı pass, 25–26.04.2008, 3 ex. (leg. M.V. Nabozhenko); Çanakkale Prov., Kazdağı, 39°44'756"N / 26°53'199"E, 1266 m, 25.05.2009, 7 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

**Remarks.** 10 specimens of this species from East and South-East Turkey are represented with color forms:

1. Upperside entirely fulvous – 3 ex.
2. Same, but prothorax with black spot or short stripe in middle – 3 ex.

3. Prothorax black with fulvous stripes on sides, elytra fulvous with darkened suture – 1 ex.

4. Prothorax black, elytra fulvous with darkened suture – 1 ex.

5. Prothorax fulvous with dark central stripe, elytra black with violaceous tint – 2 ex.

*Orsodacne variabilis* Baly, 1877 from "Kurdistan" is quite identical with color form 5, mentioned above. I have also same specimen from Iraq. *Orsodacne humeralis ruficollis* Pic, 1895 from Iran, Syria, and Lebanon is also identical with form 5, only without dark stripe on prothorax. Both these taxa have aedeagus quite identical with *O. humeralis* and are new synonyms of this species, so new synonymy is established: *Orsodacne humeralis* Latreille, 1804 = *Orsodacne variabilis* Baly, 1877, syn. n. = *Orsodacne humeralis ruficollis* Pic, 1895, syn. n.

##### *Oulema melanopus* (Linnaeus, 1758)

**Material.** Kayseri Prov., Devili Distr., Çadırıyeri, 38°10'52.2"N / 35°56'42.8"E, 1730 m, 15.04.2014, 1♀ (leg. M.V. and S.V. Nabozhenko, B. Keskin).

##### *Labidostomis asiatica* Faldermann, 1837

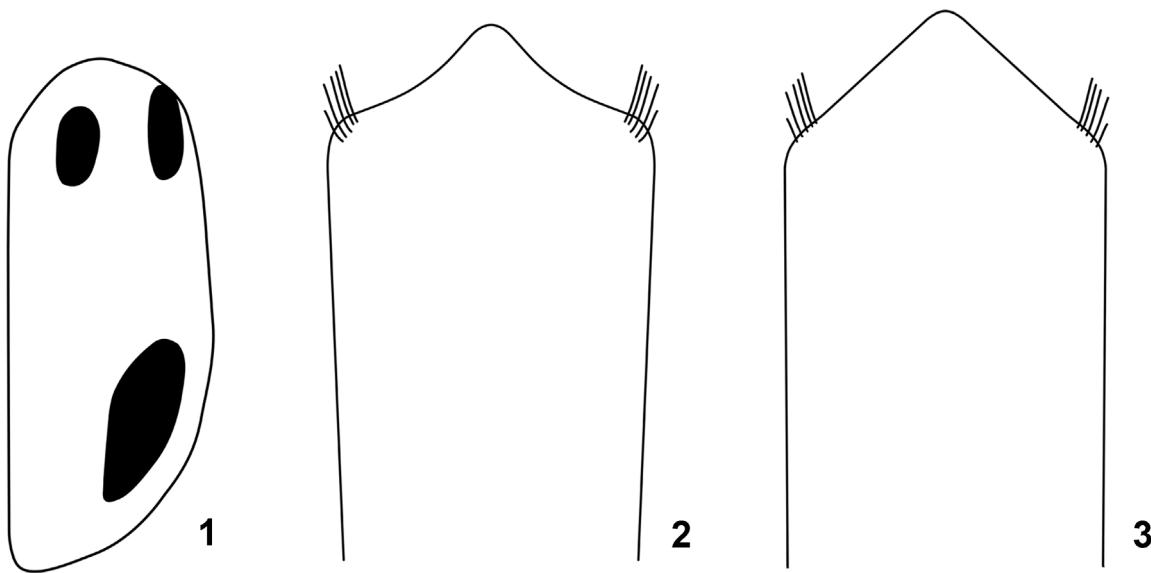

**Material.** Çorum Prov., Büget, 40°37'654"N / 35°01'653"E, 1400 m, 4.06.2009, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, I.V. Shokhin).

##### *Labidostomis propinqua* Faldermann, 1837

**Material.** Denizli Prov., Pamukkale, 12–14.2007, 1 ex. (leg. M.V. Nabozhenko); Antalya Prov., Korkuteli Distr., Ulucak, 36°58'707"N / 30°09'691"E, 1111 m, 10.05.2009, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Isparta Prov., coast of Beyşehir Gölü, 37°55'22"N / 31°18'15"E, 14.05.2009, 3 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Konya Prov., Derbent Distr., Yunuslar, 37°53'N / 31°55'E, 1300 m, 15.05.2009, 3 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Bilecik Prov., Pazaryeri Distr., Sarıdayı, 39°55'981"N / 29°50'782"E, 1178 m, 23.05.2009, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

##### *Labidostomis brevipennis* Faldermann, 1837

**Material.** Isparta Prov., coast of Beyşehir Gölü, 37°55'22"N / 31°18'15"E, 14.05.2009, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Muş Prov., Varto, 39°07'N / 41°27"E, 1450 m, 16–17.05.2009, 3 ex. (leg. I.V. Shokhin, D.G. Kasatkina); Muş Prov., Buğulan Pass, 7 km E Solhan, 38°56'N / 41°07"E, 1725–1930 m, 19–22.05.2009, 1 ex. (leg. I.V. Shokhin,

Figs 1–3. *Cryptocephalus rugicollis ottomana* subsp. n. (1–2) and *Cryptocephalus rugicollis* Olivier, 1791 (3), details of structure.

1 – elytral pattern; 2–3 – aedeagus.

Рис. 1–3. *Cryptocephalus rugicollis ottomana* subsp. n. (1–2) и *Cryptocephalus rugicollis* Olivier, 1791 (3), детали строения.

1 – рисунок на надкрыльях; 2–3 – эдагус.

D.G. Kasatkin); Çanakkale Prov., Kazdağı, 39°44'756"N / 26°53'199"E, 1266 m, 25.05.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Tunceli Prov., Pütlümür, 28–29.05.2009, 2 ex. (leg. I.V. Shokhin, D.G. Kasatkin); Van Prov., Erekdag, 38°25'53.1"N / 43°29'03.6"E, 2077–2600 m, 1.06.2013, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş).

#### *Macrolenes dentipes* (Olivier, 1808)

**Material.** İzmir Prov., Çeşme, Altinkum, coast of Aegean Sea, 38°16'N / 26°16"E, 1–2.06.2010, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

#### *Lachnaia sexpunctata* (Scopoli, 1763)

**Material.** 11 km SE Amasya, Saraycık, 40°37'N / 35°57"E, 950 m, 31.05–2.06.2009, 1 ex. (leg. I.V. Shokhin).

#### *Smaragdina hypocrita* (Lacordaire, 1848)

**Material.** Bilecik Prov., Pazaryeri Distr., Sarıdayı, 39°55'981"N / 39°50'782"E, 1178 m, 23.05.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); İzmit Prov., Gebze Distr., Tavşanlı, 23–24.04.2014, 5 ex. (leg. M.V. and S.V. Nabozhenko).

#### *Smaragdina limbata* (Steven, 1806)

**Material.** Aydin Prov., Nazilli Distr., Çobanlar, 37°59'881"N / 28°13'908"E, 949 m, 5.05.2009, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

#### *Smaragdina tibialis* (Brullé, 1832)

**Material.** İzmit Prov., Gebze Distr., Tavşanlı, 23–24.04.2014, 4 ex. (leg. M.V. and S.V. Nabozhenko).

#### *Smaragdina vaulogeri* (Pic, 1894)

**Material.** Muş Prov., Varto, 39°07'N / 41°27"E, 1450 m, 16–17.05.2009, 1 ex. (leg. I.V. Shokhin, D.G. Kasatkin).

#### *Smaragdina djebellina* (Lefèvre, 1872)

**Material.** Hakkari Prov., Yuksekovala, 37°37'08.3"N / 44°21'33.2"E, 2000 m, 5.06.2013, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş).

**Remark.** The species is firstly recorded for Turkey, was known from Syria, Lebanon, Israel and Jordan.

#### *Cryptocephalus concolor* Suffrian, 1847

**Material.** Sinop Prov., Boyabat Distr., Dumanlı Dağ, 41°25'191"N / 34°43'450"E, 938 m, 1.06.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

**Remark.** The species is firstly recorded for Turkey, was known from Armenia, Azerbaijan and Northern Iran.

#### *Cryptocephalus peyroni* Marseul, 1875

**Material.** Sinop Prov., Boyabat Distr., Dumanlı Dağ, 41°25'191"N / 34°43'450"E, 938 m, 1.06.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); İzmit Prov., Gebze Distr., Tavşanlı, 23–24.04.2014, 2 ex. (leg. M.V. and S.V. Nabozhenko).

#### *Cryptocephalus rugicollis ottomana* subsp. n. (Figs 1–2)

**Material.** Holotype, ♂: Turkey, Denizli Prov., Pamukkale, 12–14.04.2007 (leg. M.V. Nabozhenko). Paratypes: 1♀, same locality and date; 1♂, Turkey, Manisa Prov., Soma, 21.04.1990 (leg. A. Podlussány).

**Description.** Color practically same as in nominative form, elytra with all three spots well developed (Fig. 1). Punctures of prothorax very feebly, almost indistinctly strigose, other structures of body are same as in nominative form. Aedeagus with sides of apical triangle are straight (Fig. 2). Length of male 3.7–4.1 mm, of female 4.7 mm.

**Diagnosis.** The subspecies differs from the nominate subspecies in the sculpture of prothorax and form of aedeagus. In the nominate subspecies prothorax is distinctly strigose and sides of apical triangle of aedeagus

are concave (Fig. 3). Also all three known specimens from Turkey have well developed elytral spots.

Nominative subspecies is distributed in Northern Africa (Algeria, Morocco) and European western Mediterranean area from Portugal to Italy. An indication from Jordan [Lopatin, Chikatunov, 1997] very possibly belongs to the described subspecies.

*Chrysolina reitteri pseudolurida* (Roubaud, 1917)

**Material.** Denizli Prov., Pamukkale, 12–14.04.2007, 2 ex. (leg. M.V. Nabozhenko); Çorum Prov., Büyüktarım, 40°37'654"N / 35°01'653"E, 1400 m, 4.06.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, I.V. Shokhin); Konya Prov., Karapınar Distr., Meke Gölü, 37°41'23.1"N / 33°38'37.7"E, 990 m, 17.05.2010, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Malatya Prov., subdesert, 38°38'48.9"N / 38°19'44.1"E, 740 m, 21.05.2010, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Çorum Prov., Boğazkale, Hattuşa, 40°01'47.2"N / 34°37'26.7"E, 1090 m, 12–13.04.2014, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Chrysolina hyperici* (Forster, 1771)

**Material.** Sinop Prov., Boyabat Distr., Dumanlı Dağ, 41°25'191"N / 34°43'450"E, 938 m, 1.06.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Chrysolina marginata* (Linnaeus, 1758)

**Material.** Çorum Prov., Büyüktarım, 40°37'654"N / 35°01'653"E, 1400 m, 4.06.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, I.V. Shokhin).

*Chrysolina sahlbergi* (Ménétriés, 1832)

**Material.** Çorum Prov., Boğazkale, Hattuşa, 40°01'47.2"N / 34°37'26.7"E, 1090 m, 12–13.04.2014, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Amasra, 40°38'03"N / 35°50'22"E, 17.04.2014, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Chrysolina sellata* Weise, 1894

**Material.** Muğla Prov., Babadağ Ridge, Fethiye Distr., above Ovacık, 36°31'59"N / 29°11'26"E, 1300 m, 13–15.04.2008, 1 ex. (leg. M.V. Nabozhenko, B. Keskin).

*Chrysolina gypsophilae* (Küster, 1845)

**Material.** Isparta Prov., Eğirdir town, near Eğirdir lake, 12.05.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Chrysolina orientalis* (Olivier, 1807)

**Material.** Isparta Prov., Eğirdir town, near Eğirdir lake, 12.05.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Chrysolina herbacea alacris* Bechyne, 1950

**Material.** Van Prov., Erekdağ, 38°25'53.1"N / 43°29'03.6"E, 2077–2600 m, 1.06.2013, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş).

*Chrysolina salviae sculptipennis* Faldermann, 1837

**Material.** Sinop Prov., Boyabat Distr., Dumanlı Dağ, 41°25'191"N / 34°43'450"E, 938 m, 1.06.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Chrysolina grata* (Faldermann, 1837)

**Material.** Hakkari Prov., Çukurca, 37°14'32"N / 43°36'34"E, 1290 m, 4.06.2013, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş).

*Phratora horioni* (Mohr, 1968)

**Material.** Bitlis Prov., 3 km NE Tatvan, Van Lake coast, 24–26.04.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko).

*Phratora vitellinae* (Linnaeus, 1758)

**Material.** Çamlıbeyli Pass between Tokat and Sivas Provinces, 39°57'33.66"N / 36°31'33.92"E, 16.04.2014, 1♂ (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Hydrothassa flavocincta* (Brullé, 1832)

**Material.** Turkey, Muş Prov., Varto, 39°07'N / 41°27'E, 1450 m, 16–17.05.2009, 2 ex. (leg. I.V. Shokhin, D.G. Kasatkin).

**Remark.** A size of this species was given as 3.4–4.4 mm [Warchałowski, 2003], but it is correct only for females. A size of males is 2.8–3 mm.

*Neophaedon pyritosus* (Rossi, 1792)

**Material.** Antalya Prov., Korkuteli Distr., Ulucak, 36°58'707"N / 30°09'691"E, 1111 m, 10.05.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Gonioctena fornicata* (Brüggeman, 1873)

**Material.** Muş Prov., Varto, 39°07'N / 41°27'E, 1450 m, 16–17.05.2009, 1 ex. (leg. I.V. Shokhin, D.G. Kasatkin); Tokat env., 17.04.2014, 2 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Gonioctena linnaeana* (Schrank, 1781)

**Material.** Tunceli Prov., Pülümür, 28–29.05.2009, 3 ex. (leg. I.V. Shokhin, D.G. Kasatkin).

**Remarks.** These 3 specimens are represented with ab. *nigricollis* Westhoff, 1882, having black prothorax and fulvous elytra with 5 black spots (1 male and 1 female) and ab. *kraatzi* Westhoff, 1882 with black prothorax and entirely fulvous elytra (1 male), both described from Westphalia (Germany). These color forms are very rare and practically unknown from European part of Russia and the Caucasus. The species is widely distributed in the Northern Caucasus, recorded for Georgia and Turkey, but not found in Armenia and Azerbaijan. In the Caucasus the species usually has more or less bicolor prothorax. The cited above locality from East Turkey is mostly southern part of its range and very possibly it is a new subspecies. Males have parallel-sided main part of aedeagus, while aedeagus of typical *G. linnaeana* distinctly narrowed to base. However, I have no enough material for description.

*Colaphellus sophiae* (Schaller, 1783)

**Material.** Karaman Prov., Ayrancı Distr., 10 km S Kiraman, 37°11'851"N / 33°59'208"E, 1962 m, 19.04.2008, 2 ex. (leg. M.V. Nabozhenko).

*Entomoscelis adonis* (Pallas, 1771)

**Material.** Çorum Prov., Büyüktarım, 40°37'654"N / 35°01'653"E, 1400 m, 4.06.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, I.V. Shokhin).

*Galeruca spectabilis* Faldermann, 1837

**Material.** Malatya Prov., subdesert, 38°38'48.9"N / 38°19'44.1"E, 740 m, 21.05.2010, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Galeruca interrupta armeniaca* Weise, 1886

**Material.** Antalya Prov., Korkuteli Distr., Ulucak, 36°58'707"N / 30°09'691"E, 1111 m, 10.05.2009, 9 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin); Tunceli Prov., Pülümür, 28–29.05.2009, 1 ex. (leg. I.V. Shokhin, D.G. Kasatkin); Van Prov., Erekdağ, 38°25'53.1"N / 43°29'03.6"E, 2077–2600 m, 1.06.2013, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş).

*Diorhabda fischeri* Faldermann, 1837

**Material.** Hakkari Prov., Yuksekovala, 37°37'08.3"N / 44°21'33.2"E, 2000 m, 5.06.2013, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş).

*Exosoma thoracicum* Redtenbacher, 1843

**Material.** Van Prov., S Başkale, 38°01'57.9"N / 44°00'11.0"E, 2400 m, 6–7.06.2013, 4 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş).

*Luperus discolor* Faldermann, 1837

**Material.** Çorum Prov., Büyüktarım, 40°37'654"N / 35°01'653"E, 1400 m, 4.06.2009, 7 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin).

*Altica hampei* (Allard, 1867)

**Material.** Hakkari Prov., Berçelan Yaylası, 37°38'11.6"N / 43°45'20.2"E, 2700 m, 3.06.2013, 1 ex. (leg. M.V. and S.V. Nabozhenko, B. Keskin, A. Pektaş); Bitlis Prov., Nemrut volcano, 38°36'20.8"N / 42°15'23.1"E, 2330 m, 7–8.06.2013, 2 ex. (leg. M.V. and S.V. Nabozhenko, A. Pektaş).

*Derocrepis (Aeschrocnemis) serbica ? osmanica*  
Nadein, 2011

**Material.** Bitlis Prov., 3 km NE Tatvan, Van lake coast, 24–26.04.2009, 1 ex. (leg. M.V. and S.V. Nabozhenko).

**Remarks.** The genus *Derocrepis* Weise, 1886 was traditionally divided to subgenus s. str., including species with developed wings and subgenus *Aeschrocnemis* Weise, 1888, in which wings are absent. But recently the latter subgenus was erected to independent genus [Nadein, 2011]. This author divides *Aeschrocnemis* from *Derocrepis* with 4 characters: 1 – “in quadrate or subquadrate pronotum versus transverse”; 2 – “absence of hind wings”; 3 – “sutural row of elytral punctures not impressed”; 4 – “structure of aedeagus” [Nadein, 2011: 245].

The first two characters were used in the original description of *Aeschrocnemis*. The character 1 means only that pronotum in *Aeschrocnemis* is less transverse than in *Derocrepis*. Nadein indicates measurements of prothorax for all species (IP) included in his work, but only for 1 species (*Ae. delagrangei*) it is more or less quadrate (IP = 0.95–1.17), for 7 species IP is less than 1.2 and for 16 species IP larger than 1.2 and sometimes reach 1.35. But

in *D. (s. str.) rufipes* (Linnaeus, 1758) this index is about 1.5 (1.42–1.56, I measured 10 specimens). So this character is not good for genera dividing.

The second character is really very distinct, but also can not been used for separation of genera. In all large genera (*Longitarsus* Berthold, 1827, *Aphthona* Chevrolat, 1836, *Chaetocnema* Stephens, 1831, *Dibolia* Latreille, 1829, *Psylliodes* Berthold, 1827) apterous forms are known.

The third character is very variable and might be used only on species level.

The fourth character was used without any explanation. I compare aedeagi of *Derocrepis* and *Aeschrocnemis* and can confirm that all they are of the same type, only different form.

Besides, in Nadein's publication 2 new subgenera are described: *Hirticnemis* with haired elytra and *Nudicnemis* with “bare” elytra. But in reality all *Aeschrocnemis* have hairs on elytra, but often they are strongly reduced and distinct only on apices and sides of elytra. I think that these new subgenera are only more or less natural groups of species.

*Nudicnemis* differs from *Aeschrocnemis* only in sculpture of head, but specimen in my hands has frontal tubercles as in *Aeschrocnemis*, but frontal ridge as in *Nudicnemis*. It is very alike at *Ae. osmanica* Nadein, 2011 except color of head, but has also much similarity with *Ae. turcica* Nadein et Gök, 2009. But I accept my specimen only as a subspecies of *D. (Ae.) serbica* (Kutschera, 1860).

It is necessary to mention that K. Nadein accepts all subspecies of *D. (Ae.) serbica* as independent species, but that is very doubtful. Possibly a few species described by K. Nadein are also subspecies of *D. (Ae.) serbica*.

A specimen in question was collected near Van Lake in Eastern Turkey. K. Nadein indicated a species just near Van on fig. 35, but didn't indicate its name.

*Cassida undecimnotata* Gebler, 1834

**Material.** Muş Prov., Buğulan Pass, 7 km E Solhan, 38°56'N / 41°07'E, 1725–1930 m, 19–22.05.2009, 5 ex. (leg. I.V. Shokhin, D.G. Kasatkin).

*Cassida brevis* Weise, 1881
