Abstract. A list of the holotype specimens, which are personal collections of M. Chûjô and M.T. Chûjô, and will be donated to the Entomological Laboratory, Faculty of Agriculture, Kyushu University, is presented. The second list contains 140 species belonging to 91 genera, 19 families in Coleoptera. Each specific epithet has the following 3 items: bibliographical data of original description of type label; transcription of type label and condition of type specimen.

Key words: Coleoptera, holotype list, M. Chûjô and M. T. Chûjô's collection.

We recorded a part of donation on our personal collection of the type specimens to Kyushu University (M. T. Chûjô and M. Chûjô, 1997). In this second report we record 140 species belonging to 91 genera and 19 families. The style of description follows the first report.
