New Record of *Adalia bipunctata* (LINNAEUS)  
(Coleoptera, Coccinellidae) from Japan

Yasuyuki SAKURATANI

Entomological Laboratory, Faculty of Agriculture,  
Kinki University, Nara, 631, Japan

Key words: *Adalia bipunctata*; Coccinellidae; new record from Japan.

*Adalia bipunctata* (LINNAEUS) is a well-known predacious lady beetle distributed in Europe, Central Asia and North America (HODEK, 1973). This species has not been recorded from Japan (SASAJI, 1971; HIRASHIMA, 1989).

I collected two adults of *A. bipunctata* in Osaka, Japan. These are the first record

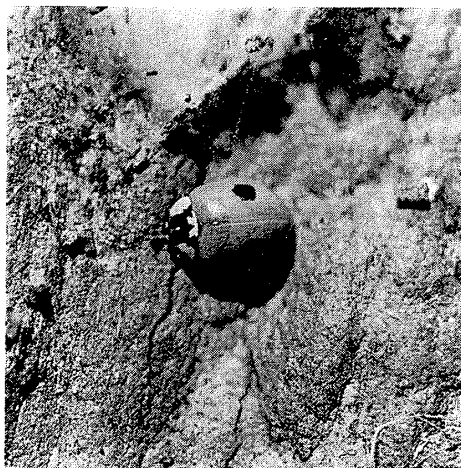

Fig. 1. A adult of *A. bipunctata* overwintering in a rotted wood-prop in Osaka Japan.

of the species from Japan.

Specimens examined: One adult overwintering in a rotten wood-prop, Nanko, Osaka City, Osaka Prefecture, 16 Dec. 1993 (Fig. 1), and one adult walking on the leaf of *Rhaphiolepis umbellata* MAKINO planted near the above wood-prop, 16 Apr. 1994.

I wish to express my thanks to Dr. H. SASAJI of Fukui University for his kindness in identification of the species and invaluable advice.
